

MICRODERMABRASION INFORMED CONSENT FORM

Iris Beauty Solution appreciates your patronage and interest in Microdermabrasion. Microdermabrasion uses light abrasion to remove the stratum corneum --the outermost layer of skin, which consists of dead cells. This technique works to remove skin that has been damaged by the sun, as well as to reduce or eliminate scars. Microdermabrasion can also lessen and remove dark spots on the surface of the skin. The process requires no anesthetic and is not painful. Microdermabrasion of a scar is most effective when the scar is raised. This treatment results in a clearer complexion with softer & smoother skin, reduces the appearance of aging, promotes collagen production, oxygenates and tightens the skin, while destroying harmful bacteria on the skin's surface.
